

Product Information

# VESTAKEEP® i4 3DF-T

## POLYETHER ETHER KETONE FILAMENT TESTING GRADE DESIGNED FOR RESEARCH, DEVELOPMENT AND PROCESS OPTIMIZATION

**VESTAKEEP® i4 3DF-T** is a filament extruded from natural colored, high viscosity VESTAKEEP® i4 G polyether ether ketone (PEEK) resin. The material is a testing grade designed for research, development and process optimization only. It must not be used for medical devices.

### Purpose of the testing grade

The purpose of the testing grade is to offer a cost-efficient solution for printing process development.

The testing grade VESTAKEEP® i4 3DF-T and the implantable grade VESTAKEEP® i4 3DF are both extruded from implantable-grade VESTAKEEP® i4 G resin. They share the same base resin, processability and mechanical properties.

### Delivery of VESTAKEEP® i4 3DF-T

VESTAKEEP® i4 3DF-T filament has a diameter of 1.75 mm (+/- 0.02 mm\*) and is supplied on TROGAMID®-spools in either 250g or 500g. The spools are packaged in double bags to facilitate transfer into clean areas.

The properties listed are for information only and only apply to the VESTAKEEP® i4 G resin used in the manufacture of VESTAKEEP® i4 3DF-T. The performance and the purity of any parts manufactured from VESTAKEEP® i4 3DF-T are highly dependent on any 3D- or additive-printing processes, or any other processing, to which the filament is subjected. Only density and filament diameter apply to VESTAKEEP® Care i4 3DF-T directly.

\*Diameters are tested by a multi-axis laser gauge. The diameter is the average of these axis.

The values presented are typical or average values, they do not constitute a specification.

### Key Features

#### Industrial Sector

Medical Devices, 3D Printing

#### Processing

3D Printing

#### Delivery form

(Mono)filament

#### Optics

Opaque

#### Resistance to

Heat (thermal stability), Hydrolysis / hot water, Oil / fuels

#### Conformity

Medical application

#### Additives

Unfilled

### Characteristics

#### Applications

Monofilament

#### Processing

Fused deposition molding, Additive manufacturing

#### Special Characteristics

Semi-crystalline, High viscosity, Sterilizable

#### Features

Resistance to steam

#### Color

Natural color

#### Chemical Resistance

Acid resistance, Alkali resistance, Solvent resistance, Grease resistance, Hydrolytically stable, Oil resistance, Oxidation resistance, General chemical resistance

### Other extrusion

#### Drying recommendations

We recommend to dry the filament prior to usage to avoid stringing, bubbles, or other defects.

- a) Filament on spool: minimum 12 hours at 80°C to 100°C. 100°C must not be exceeded to avoid distortion of the spool.
- b) Filament removed from spool: minimum 4 hours at 130°C to 140°C.

The maximum drying temperature of the filament is 140°C. Please also pay attention to the instructions of your drying device.

#### Spool dimensions

For dimensions of the spool, please see drawing below. All dimensions are given in millimeter (mm).
