| Notes to physician | |
| Symptoms | : Inhalation of process fumes and vapors may cause soreness the nose and throat and coughing. |
| Hazards | : Dust contact with the eyes can lead to mechanical irritation. Molten polymer may cause thermal burns. |
| Treatment | : Treatment of overexposure should be directed at the control or symptoms and the clinical condition of the patient. |
| | |
| 5. FIRE-FIGHTING MEASURES | |
| Suitable extinguishing media | : SMALL FIRE: Use dry chemical, CO2, or water spray. |
| | : LARGE FIRES: Use water spray hose nozzles from a safe location. |
| Unsuitable extinguishing media | : None known. |
| Specific hazards during fire fighting | Keep away from heat and sources of ignition. In case of fire hazardous decomposition products may be produced such as: Carbon monoxide, carbon dioxide and unburned hydrocarbon (smoke). |
| Special protective equipment for fire-fighters | : Wear approved positive pressure self-contained breathing apparatus and firefighter protective clothing. |
| Further information | Combustible particulate solid, will decompose under fire conditions. Calorific Value: 8000 - 11000 kcal/kg Fight fire from safe distance with hose lines or monitor nozzle Heat from fire may melt, decompose polymer, and generate flammable vapors. Move containers from fire area if it can be done without risk. Evacuate immediately in the event of opening of storage container pressure relief devices or discoloration of container. Always stay away from tanks engulfed in fire. Do not attempt to get on top of storage containers involved in fire. Cool storage containers with large volumes of water even after fire is out. |

Consult local authorities for acceptable exposure limits.

Exposure controls

Engineering measures

Follow the recommendations in NFPA 654 (as amended and adopted) for equipment used to handle this product.

Engineering controls, i.e. enclosed systems, should be used whenever feasible to maintain exposures below acceptable criteria. When such controls are not feasible, or sufficient to achieve full conformance, other engineering controls such as local exhaust ventilation should be used. Equipment and vessels handling combustible dust from this material should be designed to either prevent dust explosions (inerting) or safely vent dust explosions per NFPA 654 Ensure that dust-handling systems (such as exhaust ducts, dust collectors, vessels, and processing equipment) are designed in a manner to prevent the escape of dust into the work area (i.e., there is no leakage from the equipment).

Personal protective equipment

| Respiratory protection | Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Use appropriate respiratory protection where atmosphere exceeds recommended limits. Where workers could be exposed to dust concentrations above the exposure limit they must use appropriate certified respirators. |
|-------------------------|---|
| Hand protection | : Wear gloves that provide thermal protection where there is a potential for contact with heated material. |
| Eye and face protection | : Dust service goggles should be worn to prevent mechanical |
