Consult local authorities for acceptable exposure limits.

## Exposure controls

## Engineering measures

Follow the recommendations in NFPA 654 (as amended and adopted) for equipment used to handle this product.

Engineering controls, i.e. enclosed systems, should be used whenever feasible to maintain exposures below acceptable criteria. When such controls are not feasible, or sufficient to achieve full conformance, other engineering controls such as local exhaust ventilation should be used. Equipment and vessels handling combustible dust from this material should be designed to either prevent dust explosions (inerting) or safely vent dust explosions per NFPA 654

Ensure that dust-handling systems (such as exhaust ducts, dust collectors, vessels, and processing equipment) are designed in a manner to prevent the escape of dust into the work area (i.e., there is no leakage from the equipment).

## Personal protective equipment

| Respiratory protection   | : | Use process enclosures, local exhaust ventilation, or other<br>engineering controls to keep airborne levels below<br>recommended exposure limits.<br>When workers are facing concentrations above the exposure<br>limit they must use appropriate certified respirators.<br>Use appropriate respiratory protection where atmosphere<br>exceeds recommended limits.<br>Where workers could be exposed to dust concentrations<br>above the exposure limit they must use appropriate certified<br>respirators. |
|--------------------------|---|---|
| Hand protection          | : | Wear gloves that provide thermal protection where there is a potential for contact with heated material.  |
| Eye and face protection  | : | Dust service goggles should be worn to prevent mechanical<br>injury or other irritation to eyes due to airborne particles which<br>may result from handling this product.   |
| Skin and body protection | : | Wear suitable protective clothing.  |
| Hygiene measures         | : | Selection of appropriate personal protective equipment should<br>be based on an evaluation of the performance characteristics<br>of the protective equipment relative to the task(s) to be<br>performed, conditions present, duration of use, and the<br>hazards and/or potential hazards that may be encountered<br>during use.  |
