

VECTRA® MT®1345 - LCP

Description

30% mineral, hydrolytically stable

Vectra® MT1345 VF3001 (natural) is a 30% mineral filled, easy flow LCP grade for injection molding.

Vectra® MT1345 VF3001 (natural) is a special grade developed for medical industry applications and complies with:

- Food Contact Substance Notification (FCN) No. 742 of the Food and Drug Administration (FDA) and is listed in the Drug Master File (DMF 8464) and the Device Master File (MAF 315)
- the corresponding EU and national registry regulatory requirements
- biocompatibility in tests corresponding to USP 23 Class VI/ISO 10993
- low residual monomers
- · no animal products

Best overall surface appearance with properties similar to MT1310. Less abrasive than glass fiber reinforced grades. Improved toughness over MT1310. Outstanding hydrolytic stability. Recommended where aesthetics are key.

Chemical abbreviation according to ISO 1043-1: LCP

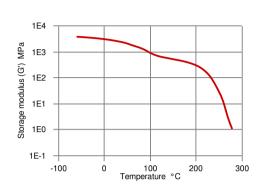

Inherently flame retardant.

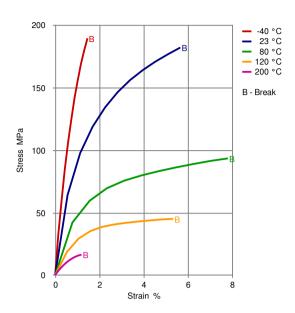

Density	Physical properties	Value	Unit	Test Standard
Molding shrinkage, parallel (flow) 0.2 % ISO 294-4, 2577	Density	1650	kg/m³	ISO 1183

Screw speed diameter, 16mm	200	RPM	
Screw speed diameter, 25mm	140	RPM	
Screw speed diameter, 40mm	80	RPM	
Other	Value	Unit	Test Standard
Specimen thickness (shrinkage)	3.18	mm	Internal

Other text information

Pre-drying

VECTRA should in principle be predried. Because of the necessary low maximum residual moisture content the use of dry air dryers is recommended. The dew point should be =< - 40° C. The time between drying and processing should be as short as possible.

Longer pre-drying times/storage

For subsequent storage of the material in the dryer until processed the temperature does not need to be lowered for grades A, B, C, D and V (<= 24 h).

Injection molding

A three-zone screw evenly divided into feed, compression, and metering zones is preferred. A higher percentage of feed flights may be needed for smaller machines: 1/2 feed, 1/4 compression, 1/4 metering.

Vectra LCPs are shear thinning, their melt viscosity decreases quickly as shear rate increases. For parts that are difficult to fill, the molder can increase the injection velocity to improve melt flow.

Injection Molding Preprocessing

Vectra resins are well known for their excellent thermal and hydrolytic stability. In order to ensure these properties are optimum, the resin should be dried correctly prior to processing. The Vectra MT-grades MT1300, MT1305, MT1310, MT1335, MT1340 and MT1345 should be dried at 150 °C for a minimum of 4 hours in a desiccant dryer.

Characteristics

Special Characteristics Flame retardant, Light stabilized

Product Categories Medical technology
Processing Injection molding

Delivery Form Pellets
