

# PIBIFOR® K2 GF/30 - PBT

# Description

Screw speed diameter, 40mm

Screw speed diameter, 55mm

| Physical properties   | Value   | Unit                    | Test Standard                            |
|---|---|-------------------------|--|
| Density   | 1530  | kg/m³                   | ISO 1183                                 |
| Melt flow rate, MFR   | 22  | g/10min                 | ISO 1133                                 |
| MFR temperature   | 250   | °C                      | ISO 1133                                 |
| MFR load  | 2.16  | kg                      | ISO 1133                                 |
| Water absorption, 23°C-sat  | 0.3   | %                       | ISO 62                                   |
| Humidity absorption, 23°C/50%RH   | 0.2   | %                       | ISO 62                                   |
| Mechanical properties   | Value   | Unit                    | Test Standard                            |
| Tensile modulus   | 9500  | MPa                     | ISO 527-2/1A                             |
| Tensile stress at break, 5mm/min  | 94  | MPa                     | ISO 527-2/1A                             |
| Tensile strain at break, 5mm/min  | 1.5   | %                       | ISO 527-2/1A                             |

# PIBIFOR® K2 GF/30 - PBT

### Other text information

### Pre-drying

CELANEX should in principle be predried. Because of the necessary low maximum residual moisture content the use of dry air dryers is recommended. The dew point should be =< - 30° C. The time between drying and processing should be as short as possible.

# Longer pre-drying times/storage

For subsequent storage of the material in the dryer until processed (<= 60 h) it is necessary to lower the temperature to 100° C.

### Injection molding

Melt Temperature 260-270 °C
Mold Temperature \*) 75-85 °C
Maximum Barrel Residence Time \*\*) 5-10 min
Injection Speed fast
Peripheral screw speed max.0,3 m/sec
Back Pressure 10-30 bar
Injection Pressure 600-1000 bar
Holding Pressure 400-800 bar
Nozzle Design open design preferred

Injection speed, injection pressure and holding pressure have to be optimized to the individual article geometry. To avoid material degradation during processing low back pressure and minimum screw speed have to be used. Overheating of the material has to be avoided. For grades containing flame retardants, a maximum temperature of 265 °C should not be exceeded.

Celanese recommends only externally heated hot runner systems.

- \*) For moulded parts with especially high requirements to the surface quality or dimensional stability, a mold temperature of up to 110 °C can be advantageous.
- \*\*) If the cylinder temperatures are higher than the recommended maximum temperatures, the max. residence time in the barrel has to be reduced.

# Characteristics

| Product Categories | Delivery Form |
|--------------------|---------------|
| Glass reinforced   | Pellets       |
|                    |               |
| Processing         | Additives     |
